

Grouted tie-back anchors to DIN 4125 for excavations

TITAN Injection Anchors are ideally suitable for post-tensioned tie-back anchors, to secure sheet pile walls, beam and timber lagging walls and bored pile walls.

All TITAN grouted anchors transfer the tensile forces from the steel rod to the grout body to the surface friction into the soil.

All grouted anchors have a free anchor length. They are post-tensioned to approximately 80% of their designed working load.

(local regulations may be different)
